ROBERT H. SCHNARRS, M.D., F.R.C.S.

**September 21, 2005**

**I have reviewed your pre-and post-op photos and your EMG report.**

**As I discussed with you in my office last month, your situation is complex and challenging. I believe that the best way to ameliorate your problems is to first excise the scars in your perineum and your thighs. I will then undermine, and plicate {suture together} the thigh muscles to close the thigh depressions. Hopefully, this will help to "fill in" the depressions. I will also lift any extra medial thigh skin to elevate and release the perineal scars, if possible. You will need another EMG and a body scan before we proceed with surgery.**

**This is all uncharted territory and so there is no guarantee of the result.**

Sincerely,

David A. Gilbert, MD
